

COUPE TYPE SUR LA STABILISATION DES PREMURS :

The diagram illustrates a cross-section of a wall stabilization system. A vertical wall on the left and a horizontal base at the bottom are shown. A diagonal anchor bolt, labeled 'TPS 300', is installed from the base into the wall. The bolt is secured at both ends with 'chape + boulon dans les douilles des prémurs' (chairs and bolts in the wall sleeves). The vertical distance from the base to the top of the wall is marked as 166. The horizontal distance from the wall face to the base of the anchor is marked as 175.
