MEL NOT REQUIRED
SHIMMY ACTUATOR FAULT

COMMENTARY

A landing porpoise is an oscillation (bouncing) set up between the aircraft's nose and main wheels, and can occur when the nosewheel contacts the runway first, either as a result of excessive landing speed or faulty pilot technique.

WORK ORDER

YCE 126 / 32-20-410
LANDING GEAR- dismantling and reassembly Shimmy damper

WARNING

you must be careful not to expose yourself to the dangers.

*****END*****

PERFORMED WORK

Le marsouinage à l'atterrissage est une oscillation (rebond) entre la roue du train avant et celles du train principal, et il peut se produire lorsque le train avant touche la piste en premier, que ce soit à cause d'une vitesse excessive à l'atterrissage ou d'une mauvaise technique de pilotage
Attention :
vous devez faire attention à ne pas vous exposer aux dangers.
